Individual report

I think I am between a 3.5 and a 4.

List of contributions and high points:
- Worked on expanding the ranges for the Vision System - it should now pick up colours on both pitches in fairly different light conditions. It is much better than before as the ranges are expanded to their maximum;
- Helped with building and testing the arduino - wiring, testing the motors, helper Georgi K with whatever needed, so he is not the only one working on it;
- I also helped with setting up the communication between the two arduinos by using the Wire.h library and helping Georgi K with wiring the two together.
- Currently implementing a solution which will register feedback from the motor and calculate the RPMs. I've got the code ready, but we I will need to wait for Garry on Monday in order to test it on both arduinos;

I think George K definitely deserves a 5, as he did the arduino work initially all by himselves.
That's it for this week. I reckon good 20+ hours have been spent since the last milestone.
